Strengthening data infrastructure: path to impact

Fiona Smith
International Development Manager
Open Data Institute

Open data is critical for:

- Monitoring **implementation of the SDGs**
- Easing the **digital divide**
- **Encouraging new** business and **innovation**
- Better **insights and decisions**
- Changing **incentives**

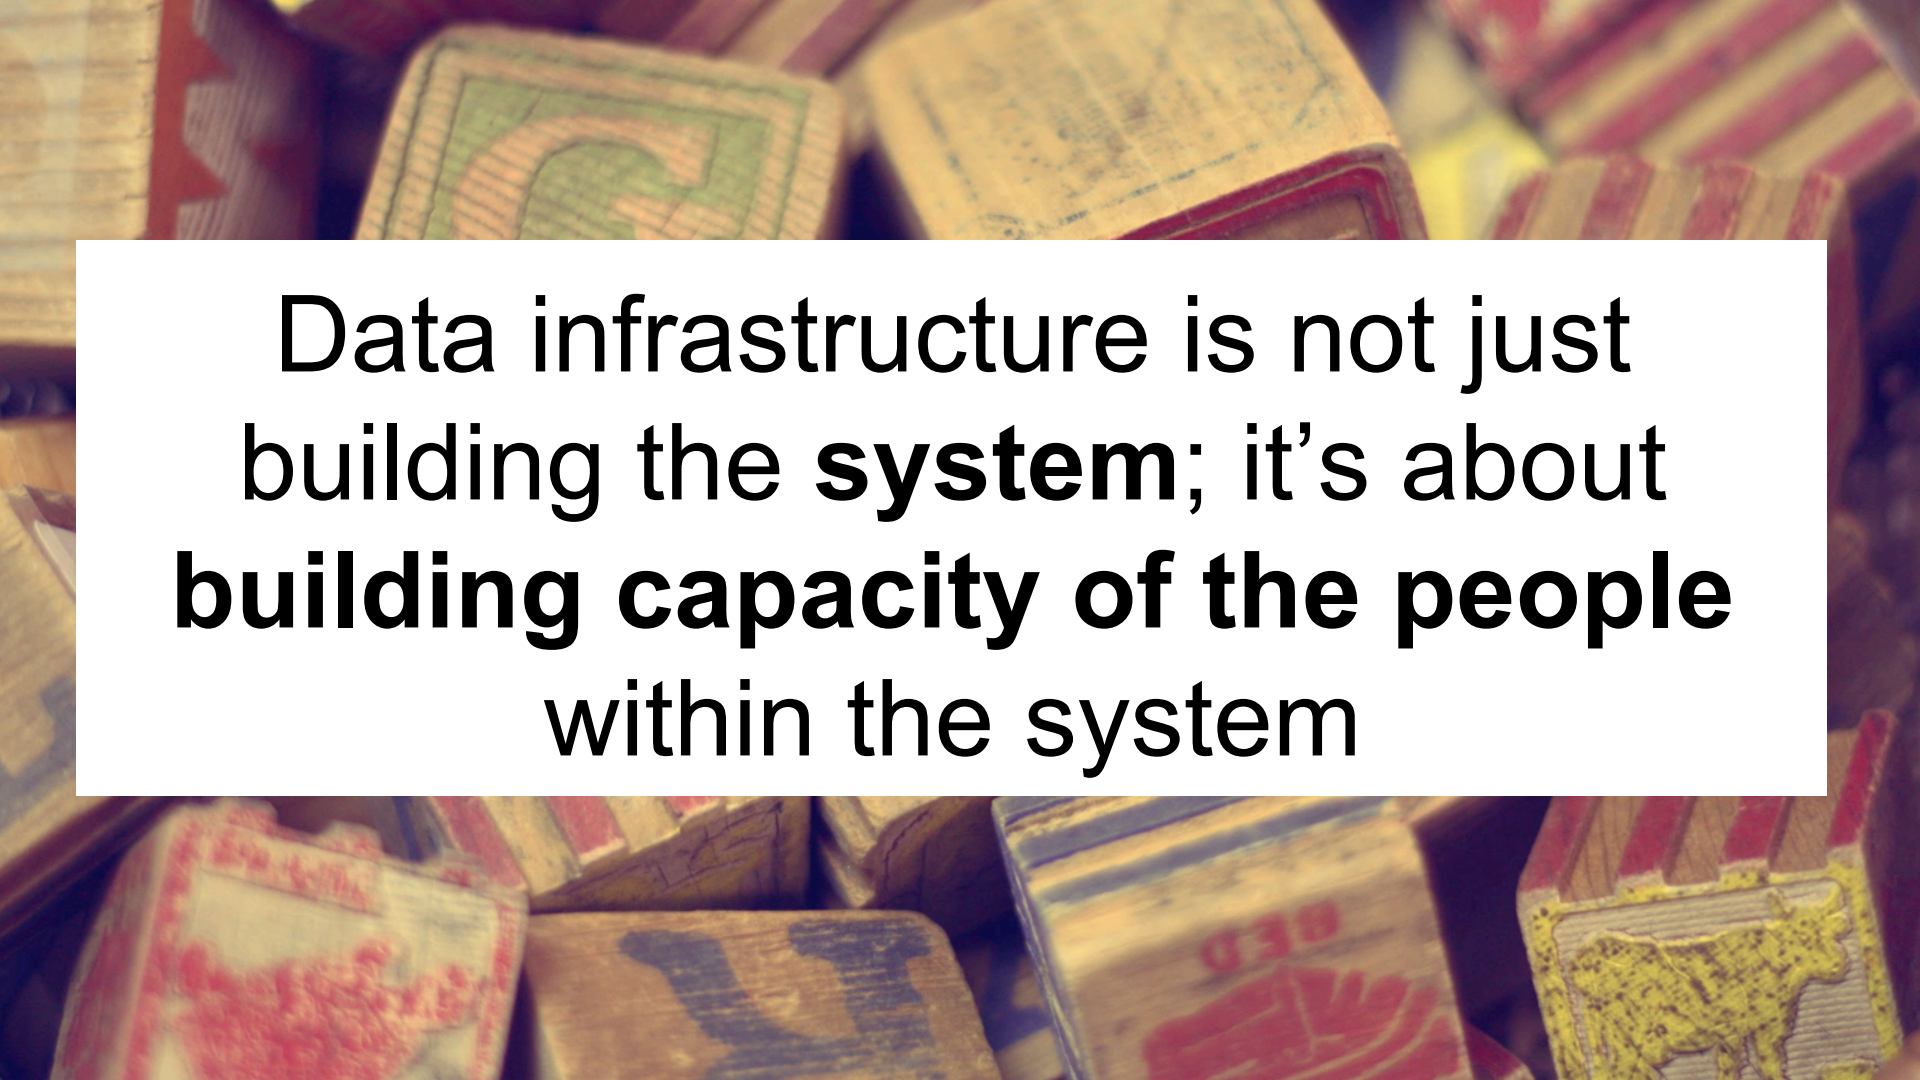
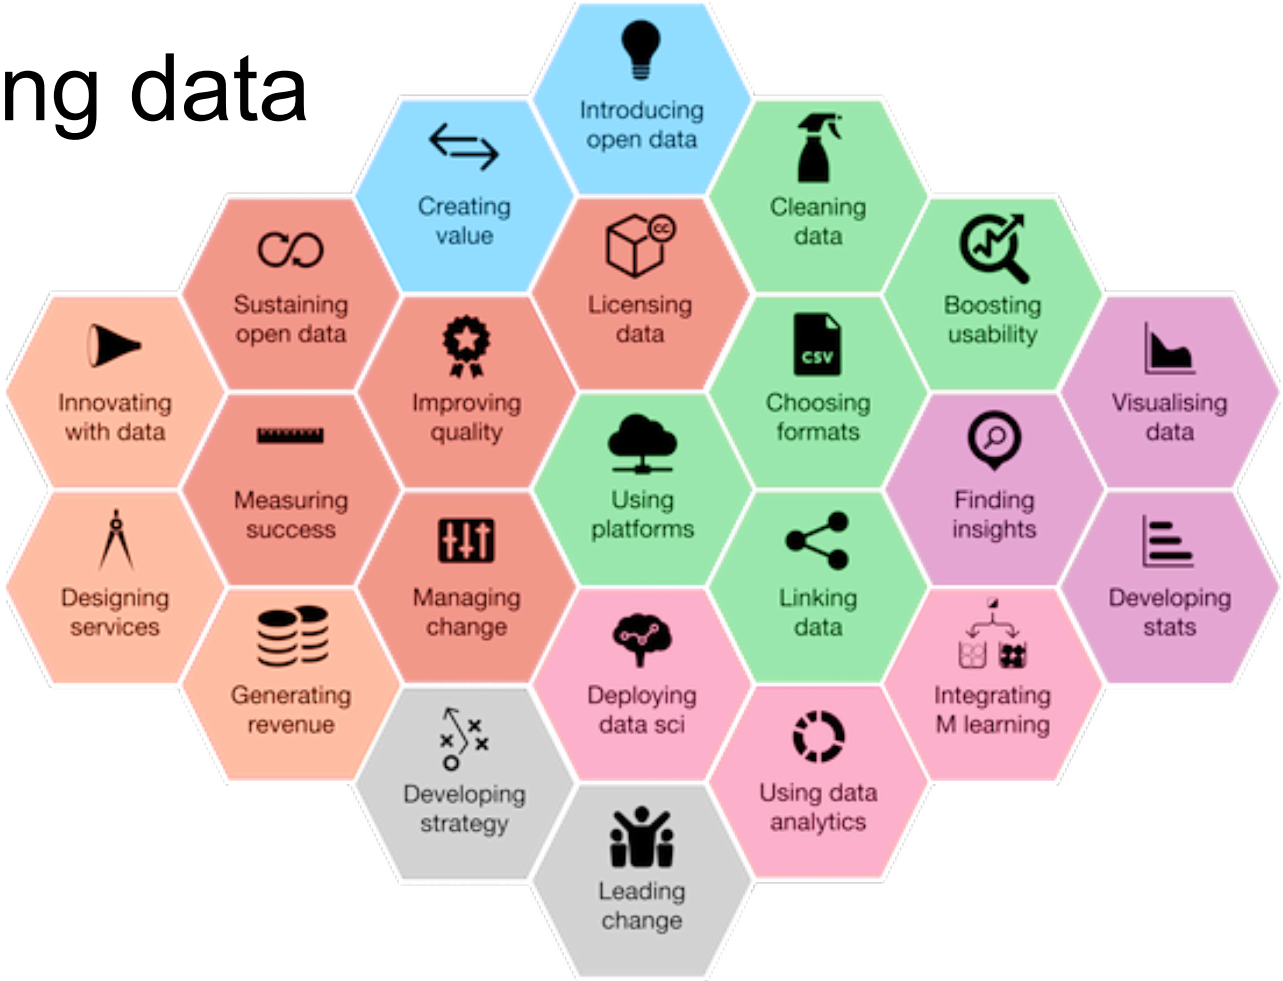
Open data: the ultimate public good?

Roads help us navigate
to a location.
Data help us navigate
to a decision.



Data infrastructure is not just building the **system**; it's about **building capacity of the people** within the system

Understanding data skills



5. Gathering data

The growing demand for data has led to an increase in human-friendly data services. However, these only account for a small fraction of the available data on the Web. This module explores where you can start looking for data and how to find data hidden in the web.

View

6. Data quality

Once you've gathered your data, how can you tell if your data is of sufficient quality? In this module we explore what data quality is, standards and checklists that you can use and Lloyd's guidelines on data quality.
